## Project Design Phase-I Proposed Solution Template

| Date          | 02 October 2022   |
|---------------|---|
| TeamID        | PNT2022TMID50923  |
| Project Name  | Project - Smart Waste Management System For Metropolitan Cities |
|               | Metropolitari cities  |
| Maximum Marks | 2 Marks   |

## **Proposed Solution Template:**

Project team shall fill the following information in proposed solution template.

| S.No. | Parameter                             | Description  |
|-------|---------------------------------------|--|
|       |                                       |  |
| 1.    | Problem Statement (Problem to be      | This project deals with the problem of waste                                     |
|       | solved)                               | management in smart cities, where the garbage                                    |
|       |                                       | collection system is not optimized. This project                                 |
|       |                                       | enables the organizations to meet their needs                                    |
|       |                                       | of smart garbage management systems. This  |
|       |                                       | system allows the authorised person to know                                      |
|       |                                       | the fill level of each garbage bin in a locality or                              |
|       |                                       | city at all times, to give a cost-effective and                                  |
|       | 1.1. /6.1.1.                          | time-saving route to the truck drivers.  |
| 2.    | Idea / Solution description           | The key research objectives are as follows:                                      |
|       |                                       | The proposed system would be able to   |
|       |                                       | automate the solid waste monitoring process                                      |
|       |                                       | and management of the overall collection process using IOT (Internet of Things). |
|       |                                       | The Proposed system consists of main   |
|       |                                       | subsystems namely Smart Trash System(STS)  |
|       |                                       | and Smart Monitoring and Controlling   |
|       |                                       | Hut(SMCH).   |
|       |                                       | • In the proposed system, whenever the waste                                     |
|       |                                       | bin gets filled this is acknowledged by placing                                  |
|       |                                       | the circuit at the waste bin, which transmits it                                 |
|       |                                       | to the receiver at the desired place in the area                                 |
|       |                                       | or spot.   |
|       |                                       | In the proposed system, the received signal                                      |
|       |                                       | indicates the waste bin status at the monitoring                                 |
|       |                                       | and controlling system.  |
| 3.    | Novelty / Uniqueness                  | We are going to establish SWM in our college                                     |
|       |                                       | but the real hard thing is that janitor (cleaner)                                |
|       |                                       | don't know to operate these thing practically so                                 |
|       |                                       | here our team planned to build a wrist band to                                   |
|       |                                       | them, that indicate via light blinking when the                                  |
|       |                                       | dustbin fill and this is Uniqueness we made                                      |
|       |                                       | here beside from project constrain.  |
| 4.    | Social Impact / Customer Satisfaction | From the public perception as worst impacts of                                   |
|       |                                       | present solid waste disposal practices are seen                                  |
|       |                                       | direct social impacts such as neighbourhood of                                   |
|       |                                       | landfills to communities, breeding of pests and                                  |
|       |                                       | loss in property values.   |

| 5.   | Business Model (Revenue Model) | Waste Management organises its operations         |
|------|--------------------------------|---|
| ] 3. | Business Woder (Nevenue Woder) | into two reportable business segments:            |
|      |                                | into two reportable business segments.            |
|      |                                | Solid Waste, comprising the Company's waste       |
|      |                                | collection, transfer, recycling and resource      |
|      |                                | recovery, and disposal services, which are        |
|      |                                | operated and managed locally by the               |
|      |                                | Company's various subsidiaries, which focus on    |
|      |                                | distinct geographic areas and Corporate and       |
|      |                                | Other, comprising the Company's other             |
|      |                                | activities, including its development and         |
|      |                                | operation of landfill gas-to-energy facilities in |
|      |                                | the INDIA, and its recycling brokerage services,  |
|      |                                | as well as various corporate functions.           |
| 6.   | Scalability of the Solution    | In this regard, smart city design has been        |
|      |                                | increasingly studied and discussed around the     |
|      |                                | world to solve this problem. Following this       |
|      |                                | approach, this paper presented an efficient IoT-  |
|      |                                | based and real-time waste management model        |
|      |                                | for improving the living environment in cities,   |
|      |                                | focused on a citizen perspective. The proposed    |
|      |                                | system uses sensor and communication              |
|      |                                | technologies where waste data is collected        |
|      |                                | from the smart bin, in real-time, and then        |
|      |                                | transmitted to an online platform where           |
|      |                                | citizens can access and check the availability of |
|      |                                | the compartments scattered around a city.         |
