Project Design Phase-II Solution Requirements (Functional & Non-functional)

Date	08 October 2022
TeamID	PNT2022TMID50923
Project Name	Project – Smart Waste Management System
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Detailed bin inventory	All monitored bins and stands can be seen on the map,
		and you can visit them at any time via the Street View
		feature from Google.
		Bins or stands are visible on the map as green, orange
		or red circles.
		You can see bin details in the Dashboard – capacity,
		waste type, last measurement, GPS location and
		collection schedule or pick recognition.
FR-2	Real time bin monitoring	The Dashboard displays real-time data on fill-levels of
		bins monitored by smart sensors.
		In addition to the % of fill-level, based on the historical
		data, the tool predicts when the bin will become full,
		one of the functionalities that are not included even in
		the best waste management software
		Sensors recognize picks as well; so you can check when
		the bin was last collected.
		With real-time data and predictions, you can eliminate
		the overflowing bins and stop collecting half-empty
		ones.
FR-3	Expensive bins	We help you identify bins that drive up your collection
		costs. The tool calculates a rating for each bin in terms
		of collection costs.
		The tool considers the average distance depo-bin-
		discharge in the area. The tool assigns bin a rating
		(1-10) and calculates distance from depo-bin discharge.
FR-4	Adjust bin distribution	Ensure the most optimal distribution of bins.
		Identify areas with either dense or sparse bin
		distribution.
		Make sure all trash types are represented within a
		stand.
		Based on the historical data, you can adjust bin capacity
		or location where necessary.
FR-5	Eliminate unefficient picks	Eliminate the collection of half-empty bins.
		The sensors recognize picks.
		By using real-time data on fill-levels and pick
		recognition, we can show you how full the bins you
		collect are.
		The report shows how full the bin was when picked.
		You immediately see any inefficient picks below 80%
		full.

FR-6	Plan waste collection routes	The tool semi-automates waste collection route
		planning. Based on current bin fill-levels and predictions
		of reaching full capacity, you are ready to respond and
		schedule waste collection.
		You can compare planned vs executed routes to
		identify any inconsistencies.

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution. $\label{eq:following} % \begin{center} \begin{center}$

NFR-1 Usability IoT device verifies that usability is a special and important perspective to analyse user requirements, which can further improve the design quality. In the design process with user experience as the core, the analysis of users' product usability can indeed help designers better understand users' potential needs in waste management, behaviour and experience. NFR-2 Security Use a reusable bottles Use reusable grocery bags Purchase wisely and recycle Avoid single use food and drink containers. NFR-3 Reliability Smart waste management is also about creating better working conditions for waste collectors and drivers. Instead of driving the same collectors or outes and servicing empty bins, waste collectors will spend their time more efficiently, taking care of bins that need servicing. NFR-4 Performance The Smart Sensors use ultrasound technology to measure the fill levels (along with other data) in bins several times a day. Using a variety of IoT networks (NB-IoT,GPRS), the sensors send the data too Sensoneo's Smart Waste Management Software System, a powerful cloud-based platform, for data-driven daily operations, available also as a waste management app. Customers are hence provided data-driven decision making, and optimization of waste collection routes, frequencies, and wehicle loads resulting in route reduction by at least 30%. NFR-5 Availability By developing & deploying resilient hardware and beautiful software we empower cities, businesses, and countries to manage wastes smarter. Using smart waste bins reduce the number of bins inside town, cities coz we able to monitor the garbage 24/7 more cost effect and scalability when we moves to smarter.
